| <p> 1. Introduction The purpose of this study is to investigate the effects of the proposed system on the performance of the participants. The study was conducted in a laboratory setting with a sample of 30 participants. The participants were divided into two groups: a control group and an experimental group. The control group used a traditional system, while the experimental group used the proposed system. The results of the study show that the proposed system significantly improved the performance of the participants compared to the traditional system. The study also identified some limitations and future research directions. </p> |
| <p> 2. Literature Review The literature review covers the existing research on the topic. It includes studies on the effectiveness of the proposed system and the impact of the system on the performance of the participants. The review also identifies the gaps in the existing research and the need for further investigation. </p> |
| <p> 3. Methodology The methodology section describes the research design, the participants, the data collection methods, and the data analysis techniques. The study used a quasi-experimental design with a pre-test and post-test. The participants were recruited from a university and were assigned to the control and experimental groups. The data was collected using a questionnaire and a performance test. The data was analyzed using statistical methods. </p> |
| <p> 4. Results The results section presents the findings of the study. It includes the mean scores of the participants in the control and experimental groups, the standard deviation, and the statistical significance of the results. The results show that the proposed system significantly improved the performance of the participants compared to the traditional system. </p> |
| <p> 5. Discussion The discussion section discusses the implications of the findings and the limitations of the study. It also suggests future research directions. The study has several limitations, including a small sample size and a laboratory setting. Future research should investigate the effects of the proposed system on a larger sample and in a real-world setting. </p> |
| <p> 6. Conclusion The conclusion summarizes the main findings of the study and the overall contribution of the research. The study concludes that the proposed system is an effective tool for improving the performance of the participants. </p> |
| <p> 7. References The references list the sources used in the study. The references include books, journal articles, and online resources. </p> |
| <p> 8. Appendix The appendix contains the questionnaire and the performance test used in the study. </p> |
